A node has properties, events, methods and a method of access. Nodes are used to encapsulate all data associated with the programmer's code. Most of the time, we need to write a long series of code that are beyond the convenience of the user. Then, we create a node to group the code together to form one logical unit. This is where a Node Class comes into use. A ServiceModel element is a marker element that helps a reader to identify a specific type of ServiceModel component. A ServiceModel element is usually included in a ServiceModel.xsd file. The service models in different.xsd files are not a must. Also, the content of each element is optional. The structure of a ServiceModel element resembles the schema of a ServiceModel. Introduction J2EE is one of the most used technologies. It has a large number of features.
